LAND OF ILLUSION

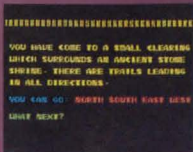

In this graphic adventure, which takes place in the thirteenth century, when the land was run by local sheriffs whose only problems were local bandits and collecting of taxes, you

have returned from a local war to discover that your village has been possessed by an evil curse created decades ago. You will find all the villagers slightly alien to you

because of the curse. Once you have located the village your adventure begins. There are many creatures within Land of Illusion which will attack you with alarming results.

but you are equipped to handle these situations if you ask the right questions.

OBJECT OF THE GAME

Once you realise that your villagers are under an evil curse, you soon find some clues.

Why has BARTHOG created the curse?

Who is ZEB?

And where does DYNARD'S trail lead to?

Can the mushrooms help break the spell, or is the answer lying under a stone in the forest? As you go through the area you will be shown many hi-res graphic interpretations in full colour, coupled with amazing sound effects throughout - you have to release your village from the curse . . .

Good luck, and if you do do it, let me know.

DANIEL J. MORRIS

Daniel is a 25 year old Civil Servant who uses an Oric purely for fun as opposed to anything else.

He first started his computing career less than a year ago when his girlfriend bought him a second hand Oric 1 as a present.

Daniel, who was naturally good at maths and sciences in school soon became a proficient programmer and being a perfectionist at heart decided he could write an adventure game better than any out on the market at the moment.

His job puts him on shift work and as a result he comes in at all hours in the morning and starts programming until he gets tired.

Thus after many hours of programming at all hours in the morning, over many steaming cups of coffee, LAND OF ILLUSION came about.

He has no hates, so he tells me, but he does have a great weakness for chinese food. His other hobbies include painting and snooker, the latter of which has won him several prizes.

His ambitions are to be rich and famous with as little effort as possible (like us all!).

NEW

Oric have introduced an engineering improvement to enhance already excellent reliability. The improvement takes the form of a protective cover for the expansion bus connector on the Oric 1 and Atmos. This prevents the accidental application of power to the bus. Additionally the industrial quality connector is protected for future use with disk drives, the expansion box or the Z80 box.

Existing Oric Owners can receive this part FREE, in line with Oric's policy of product support. All you have to do is send an SAE to TANSOFT, Techno Park, Newmarket Road, Cambridge.

COMPANY PROFILE

Tansoft was formed in early 1982 by Dr Paul Johnson and Barry Muncaster and started trading fully at the beginning of 1983, which makes it one of the longest established microcomputer software houses.

Tansoft started by producing software for the Tangerine microcomputer. Hence the name. With the arrival of the Oric and then the Atmos, these machines too were supported.

Tansoft is now a multi-faceted company with a range of software for most popular microcomputers. This software is distributed throughout the world and is also sold directly by Tansoft's friendly mail order department, along with a range of Atmos compatible hardware.

Tansoft are now set for an exciting future with a wide range of software on its way for virtually every microcomputer.
