

COMPLETE PRODUCTS GUIDE

OMNITREND'S

UNIVERSE

You are at the Vromus Prime Starport, sitting in front of a data entry console. For years, you have been shipping Tenthors to planets throughout the Local Group and for years you have been asking yourself what a Tenthor is. No one has had a satisfactory answer yet. Dejected, you cast your eyes downward, to rest them upon a crystalmem chip that someone has forgotten. You push the chip into the "read-only" slot on the data entry console. An auxilliary screen begins displaying a complete products guide. Oyabeno, Gubricke's Guide, and W'reun Crystals; they are all on the list. You reach out and stop the display at random and glance at the third item from the top. It is a description of a Tenthor. Not only do you now know what Tenthor is, but you even know its sophistication. This should increase your trading profit tremendously.

The Complete Products Guide is an expansion module for the Omnitrend's Universe instruction manual. It contains information on a product's type, cargo size, sophistication, and a brief description of the item, for all 640 products. The Complete Products Guide is designed to fit right in with the rest of the manual. No serious trader should be without it.
