NEWSLETTER

As sales seem to be the order of the day, enclosed herewith you will see some pretty drastic price reductions on our part so that we can move some stock during the summer months. You may also want to know that Tandy are having an equally dramatic sale on their Model II/16 software. If you have a Model II/16, I would suggest that you contact them for their list if you have not already received it.

As you all know, Tandy are selling many third party computers nowadays and are concentrating their own line almost entirely on the 16 bit machines. Some customers are not aware that we publish other catalogues for different machines, one of which is for the IBM PC. All of the software in that list (at least to the best of our knowledge) operates correctly on the Tandy 1000 series. Consequently, if you have up-graded to the 1000, or have friends that have such a machine, you may wish to get on our IBM catalogue mailing list. For those of you who also have interest in the Sanyo 55x series, we have a catalogue for you as well!

The new volume of the Programmer's Handbook of Computer Printer Commands is now available in stock. This covers the printers issued in 1985 from about 16 manufacturers. Although, the number of printers covered is less than in the first volume there are a number of useful appendices and the book still runs to about 184 pages. The price is £25. We do not have too many of the first volume left, which you will recall was priced at £30. For anybody who wishes to purchase them both together, they are available at £45. With these two books in his library, the programmer has a note of computer printer commands of almost all printers on the market at the present time.

One of our authors has written a replacement for the DosTamer running on Model I/III. This is not quite ready for market yet, but it certainly will be within a few weeks time. Thus customers that are waiting to have the advantages of DosTamer with their Model I or III machines should contact us.

It may not be generally known but wherever we have control of a program, in other words wherever we publish the program, we are prepared to update existing owners of that program when they buy a new Tandy machine. If you have a Model I version of such a program and buy a Model 4 machine, then we can update you to the Model 4 version. The cost is 20% of the list price. In other words you get an 80% discount on the new version. This is plus VAT and shipping. We do not delineate between our own programs in the catalogue index but I think most people know which they are. Certainly they constitute the majority of the index. It would probably always be wise to check with us on the telephone whether we are able to extend this update privilege for whatever program you have interest in.

One of our long time customers, Mr R Butterworth, has formed a company called Microplan Business Systems operating out of Moortop, Onecote, Leek, Staffs. Telephone number 0538 8321. He has a series of business programs for the Tandy machines, in particular he sells an invoice, purchase and nominal ledgers plus payroll control. Unlike many such vendors, he is prepared to customize his programs to the requirements of a customer. He is also prepared to write new business programs. If you have any interest in this area, I suggest that you contact Mr Butterworth at the address mentioned. The reason that I am giving Mr Butterworth this plug is because the willingness to change software is comparatively rare and it does make it impossible for a software house, such as us, to stock it. It is therefore much better if the customer contact him direct.

I hope you will all have an enjoyable summer, do not forget that computers thrive on work. They hate being left on their own, unattended for very long, so do not forget them whilst the sun is shining and more importantly, do not forget to order your software!

Yours sincerely

A J Harding

V & X SALE!

TWO PRICE SOFTWARE SALE - £5 & £10 !!

It may be Summer Madness but we want to shift an awful lot of stock by the time we come to the Autumn!

The 20% sale already in existence will continue until the end of the summer. These pages constitute an addition to that sale and they really are mad prices! Even if you do not want any software, have a look at them, they will shock, or please you, depending upon your viewpoint!

With prices like this, there is a catch! But first the good news: all of this stock is our normal product. It is shipped by us, exactly as if it were full price stock. The catch is that we will not, repeat **not** accept support telephone calls on this sale. We simply cannot afford, at these prices, to have somebody tied up on the telephone answering questions such as how to load a program or whatever, when it is described in the manual. To that extent therefore, you are on your own. Having said that however, we would repeat that this is normal stock that we have been selling for many years and it is unlikely that you will have any problem. But, if you do, you will have to sort it out for yourself!

The other disclaimer is that we have been known in the past to break our normal rule of accepting no returns; with this sale we will not be breaking that rule! So make certain that you are buying what you want before you put in your order.

The format of the list is as per the Catalogue, with the exception of the last column which is the sale price. That is to say, the program name, Catalogue page number, relevant model number, media and category. The keys for the codes, of course, are at the end of the Catalogue Index. All prices are V.A.T. inclusive.
