Currently composing music for King's Quest IV.

William Goldstein, film composer and recording artist.

RECEIVE A FREE AUDIO CASSETTE DEMONSTRATING
THE ROLAND MT-32 AND THE AD LIB
MUSIC SYNTHESIZER CARD! HEAR THE SOUNDS OF
SIERRA'S NEW ENTERTAINMENT SOFTWARE!

GIVE YOUR PC THE CAPABILITY TO PLAY SENSATIONAL MUSIC AND SOUND EFFECTS IN STEREO!

Sierra's new line of entertainment software currently supports the three major sound cards. Each provides a variety of features guaranteed to enhance the performance of your personal computer.

1. **The Ad Lib Music Synthesizer Card (ALMSC)** is an 11-voice music synthesizer for use with the IBM PC and compatibles. Based on FM technology, the Ad Lib Music Synthesizer Card offers the same music synthesizer found on many popular keyboards. One familiar with this technology will be amazed to hear such percussive sounds as bass drum, tom-tom, cymbal and hi-hat. This is because the card is cleverly designed to combine the use of white noise generation with FM synthesis.

The Ad Lib Music Synthesizer Card package includes the Juke Box playback program with a rousing selection of original songs.

The Ad Lib Music Synthesizer Card is a half-size card that fits into any expansion slot on the PC Motherboard. On the back of the card is a volume control and an audio jack to which you can attach headphones, external speakers or even your home stereo system.

Also available is Visual Composer software (SP10), a sequencer program designed specifically to assist you in composing songs with your Ad Lib Music Synthesizer Card.

To order either the Ad Lib Music Synthesizer Card (SP09) or the Ad Lib Music Synthesizer Software Package (SP10) fill out the coupon to the right.

2. **The Roland MT-32 Sound Module** is a 32-voice synthesizer for the IBM PC and compatibles. The MT-32 is designed to provide the capabilities demanded for high-end use. The MT-32 is actually eight individual synthesizers and a percussion sound module. The 32 partials accept up to 32-voice polyphony, which is divided among the MT-32's eight separate synthesizer parts. Each synth part operates on an individual MIDI channel (2-9) with the rhythm part preassigned to channel 10.

The rhythm section contains 30 different preset PCM drum and percussion sounds.

The synthesizer section has 128 preset sounds including acoustic and electric piano, organ, synth bass, synth brass, synth strings, guitar, bass, winds, and special effects.

Included with the MT-32 is the Roland MPU-IPC MIDI Processing Unit, which forms a truly intelligent interface between your MIDI instruments and your computer. This unit makes things easy for your computer. It organizes packets of MIDI data into complete MIDI events and actually masks redundant data, enabling your computer to process MIDI much more rapidly than it could if it had to manage these tasks.

The MPU-IPC has a single MIDI In and 2 MIDI Outs, Sync Out as well as jacks for Tape Sync In/Out.

Also included with this package is Ease songmaker software, designed specifically to help you compose your own songs using the MT-32.

The complete Roland MT-32 system can be ordered direct from Sierra.

3. **The IBM PC Music Feature** is an eight-voice music card for use with the IBM PC and compatibles. This full-size music card uses the FM tone generation method and has 240 preset voices. It has the capability to store an additional 96 user-programmed voices.

This music card provides a MIDI port that allows you to connect devices that comply with MIDI Specification 1.0.

The IBM Music Feature can be ordered directly through your authorized IBM dealer.

ORDER THE ROLAND MT-32 OR THE AD LIB MUSIC SYNTHESIZER CARD

THE MUSIC EXPLOSION IS ON ITS WAY... AND NOW YOU CAN TAKE ADVANTAGE OF IT!

The same full stereo sounds you enjoy on your home stereo and television set are now available for your personal computer!

Sierra games now feature full stereo soundtracks as composed by popular recording artists, including Hollywood composer William Goldstein and Rock 'n Roll musician Bob Siebenberg of Supertramp. Each Sierra game supports a variety of sound cards with a broad range of features and prices.

Listen to the music potential of your personal computer by ordering Sierra's FREE Music Demonstration cassette. Included on the cassette are samples of Sierra game soundtracks as performed on an IBM computer with the Roland MT-32 Sound Module and the Ad Lib Music Synthesizer Card. Compare for yourself the different sounds and decide which music product is right for you.
